From manual to automatic: The road to a streamlined review and audit process

University of Utah Health

Snapshot of University of Utah Health

Academic and trauma medical center with a tertiary referral base. Serves the intermountain West region.

An integrated auditing and coding team made up of nurses, coders, auditors, educators and quality liaisons.

The challenge

University of Utah Health started the audit process in a spreadsheet-based world. The spreadsheet changed and adapted over multiple years, and grew when new information was added. Although the organization made it work, it was far from the most efficient or unified approach to manage audits. In addition to a manual process, each auditor had a slight variation in their approach.

The ultimate outcome? A time consuming and inefficient way to understand and manage the data. As the team's responsibilities continued to increase, they needed a better process and more supportive technology to make their audits more efficient.

The solution

University of Utah Health is a long time partner of 3M Health Information Systems. The organization partnered with 3M to deploy two new prospective prebill and retrospective audit solutions: **3M™ 360 Encompass™ System Audit Expert System — Inpatient Prebill Review** and **3M™ 360 Encompass™ System Audit Expert System — Code Audit**. The goal was to use technology to streamline, automate and standardize the review and audit processes, integrating a more efficient practice across the different functions. University of Utah Health pioneered these two solutions and provided valuable feedback and user experience data that the 3M product team used to enhance the solution.

Prospective prebill review process

The new edit, review and audit solutions within the 3M Inpatient Prebill Review module enable actionable custom edits to identify errors at the point of coding, as part of the coder's workflow. These custom edits were developed to specifically address the coding errors identified by the University of Utah Health coding and auditing management team. Coding errors are resolved within the coding workflow rather than placed on an additional hold, or worked on further downstream in the revenue cycle, which facilitates better coding accuracy.

Case study From manual to automatic: The road to a streamlined review and audit process

In addition to the actionable custom edits, 3M Inpatient Prebill Review prompts specific criteria to a second level review for additional analysis. According to Nancy Blattberg-Smith, MPH, RHIA, CDIP, CCS, manager of data integrity at University of Utah Health, “ultimately the additional review could eliminate rebills and enable coders and auditors to work together and provider quicker and more timely feedback.”

The second level review process allows the auditors to take a deeper look at their mortality review gains and losses, identifying net dollar changes that could affect the facility’s revenue stream.

Retrospective audit process

In addition to using actionable custom edits and second level reviews as part of the prospective coding accuracy process, University of Utah Health also integrated 3M Code Audit for retrospective reviews. Retrospective audits are completed within the **3M™ 360 Encompass™ System**, referencing the codes and the documentation used to create the patient record and removing the manual methods required to create randomized audits previously managed via email.

3M Code Audit provides a more efficient way to initiate retrospective audits, review the code set, provide two way communication and agreement between the coder and the auditor, and operationalize the overall process. The retrospective audit process also provides insight into coding errors and challenges. This helps direct targeted education and potential new custom edits and review opportunities that can be added to the prebill process— all within a single platform.

Results

University of Utah Health took full advantage of not only changing a manual process for retrospective reviews, but also creating a standardized and more effective way to address potential issues at the front end of the coding session with a prebill process.

Ultimately, the integration of both 3M Inpatient Prebill Review and 3M Code Audit streamlined the coding accuracy and audit process, which is critical to University of Utah Health’s commitment to quality.

The University of Utah Health’s results with 3M:

Reduced rebill time
from 30+ days to

3 days

post-patient discharge
with the prebill process

DRG mortality
review identified

\$210k

potential
undercoding

Issues resolved at the

front end

of the coding
process

Audit output
doubled from

5% to 10%

per coder per month
