

3M™ Health Analytics Suite hospital assessment

- Identify ways to improve performance and track and measure outcomes and resource utilization in the inpatient and outpatient setting
- Gauge efficiency and performance by physicians and their peer groups
- Track and measure patient acuity, admissions, costs, preventables, quality measures and more to identify opportunities for improvement and minimize penalties

A close-up look at patient data and physician performance

3M™ Health Analytics Suite hospital assessment utilizes public and facility data sets and inpatient and outpatient claims data to offer organizations a patient-level view of how to best reduce length of stay and improve mortality, costs and charges, as well as highlight provider performance.

The application dives into patient data and shows the impact of potentially preventable readmissions (PPRs), potentially preventable complications (PPCs), potentially preventable admissions (PPAs), potentially preventable visits (PPVs) for outpatient, and compares peer-to-peer performance using 3M benchmarks. The 3M hospital assessment drills into data provided by organizations, all the way to the individual patient level for up-to-date reporting and to help find immediate action items to improve outcomes and decrease costs.

The 3M hospital assessment also identifies patient severity ratios and high costs by physicians. The technology supports The Joint Commission Ongoing Professional Practice Evaluations (OPPEs) and additional assessments, comparing the performance of providers and peer groups, as well as patient utilization details.

With the **3M™ Potentially Preventable Readmissions (PPR) Grouping Software** and the **3M™ Potentially Preventable Complications (PPC) Grouping Software**, organizations receive a more detailed look at patients and can quickly see where and how to improve quality and amend coding and documentation issues. Weaving 3M's proprietary physician auditing software with the grouping application results in a powerful lens through which you can validate and verify providers' hard work and achievements.

Patient analytics for optimized reporting

With the 3M hospital assessment, hospitals also receive exception reporting, which identifies cases that fall outside of the norm, such as:

- Mortality in low risk cases
- High costs and long length of stay
- Readmissions
- Other quality indicators identified by your organization

The report not only analyzes admission and discharge status, but payer breakdown.

3M™ Health Analytics Suite hospital assessment

Your physician data. Our analytical power.

Whether you are looking at the data from a department, quality, recruiting or strategic perspective, the information revealed by the 3M hospital assessment is vital. The data showcased helps users have meaningful conversations with physicians about quality. The data also highlights the documentation's ability to affect outcomes. Within the application, users drill down to patient-level detail and can filter information by discharge years or months, member hospitals, hospital groups, volumes, admissions, charges, patient age and more.

Physician data categories:

- Physician overviews
- Resource utilization
- Admissions and discharges
- Preventables (complications, readmissions, etc.)

When reviewing a physician's use of resources, the 3M hospital assessment uses logic to gauge hospital acquired conditions, publicly measured metrics like the top five **3M™ All Patient Refined (APR) DRG software** and **3M™ Enhanced Ambulatory Patient Grouping (EAPG) Classification**, length of stay performance and mortality. In terms of preventables, the 3M hospital assessment looks at what kinds of complications and readmissions can be attributed to a particular physician to identify opportunities for education, which can lead to improved quality and decreased expenses.

Interactive reporting and robust dashboards

Through the 3M hospital assessment's intuitive user interface and interactive dashboards, administrators can select their own metrics and views. Organizations have the freedom to create reflective, up-to-date reviews of hospital data and performance, as well as track physicians' performance within the dashboards and reports available in the 3M hospital assessment.
