

## Solventum education boot camps - Advanced clinical documentation integrity (CDI) pediatric training

- Comprehensive CDI education addressing the CDI skills and the clinical and coding concepts that differentiate adult and pediatric populations
- Build a complete, accurate and compliant clinical record that focuses on the unique needs of the pediatric population

### Virtual advanced CDI pediatric training

Health system CDI programs are built to document the adult population. Even though the pediatric population may have similar conditions as adults, a unique approach is often required for analyzing a pediatric medical record. Not accounting for the differences between adult and pediatric populations could impact the patient and your CDI program in multiple ways, including reimbursement and incorrect documentation and diagnosis. This could lead to quality issues and denials.

Solventum pediatric training offers a comprehensive approach to address fundamental CDI skills, Medicare Severity (MS), case mix index (CMI), and Solventum™ All Patient Refined Diagnosis Related Groups (APR DRGs) Classification System, the intricacies of the inpatient prospective payment system (IPPS), coding guidelines and key major diagnostic categories (MDCs) with a pediatric focus. Solventum's advanced pediatric training can prepare your CDI team to recognize the unique problems and challenges in a pediatric population, leading to more accurate documentation.

## The Solventum approach to pediatric CDI education enables participants to:

- Distinguish and identify unique differentiators for pediatric and neonatal populations in the coding and documentation process.
- More accurately diagnose pediatric patients who are still developing and require special attention to growth and development issues that can impact the course of care for years to come.
- Conduct an evaluation and management (E/M) exam and physical for a pediatric patient to provide the clinical picture of how the condition might differ in an immature body with differing physiological responses to adults.
- Review the coding and reporting of certain conditions originating in the perinatal period.
- Discover how the clinical application of APR DRG, MS, CMI, IPPS and MDCs are impacted by pediatric and common secondary diagnosis.
- Provide specific examples to show how chronic disorders, such as cystic fibrosis, tracheal stenosis and hydrocephalus differ in the two populations.

# Start your training

Training weeks will be offered multiple times throughout the year and pricing is on a per student basis\*. Class sizes are limited to ensure each participant gets the personalized attention they need. Visit our website to learn more about upcoming educational boot camps, register and more.

*\*Talk to your sales rep about other pricing opportunities*

## Who should take the pediatric training?

This week of training has been tailor made for experienced CDI, coding and quality professionals and multidisciplinary CDI teams looking to develop their pediatric knowledge. It is also suited to clinical documentation specialists (CDS) with a pediatric background looking to enhance their skills and for pediatric focused CDI teams to improve their overall CDI knowledge.

## Why train with Solventum?

Solventum created the industry's first formal CDI program and has successfully educated and trained thousands of CDI specialists and coders since the early 1980s. With more than four decades of industry experience and more than 3,000 customers, our Solventum consultants are not only experienced educators, CDI specialists and coding professionals, but they are also on the front lines working hand in hand with clients to advance and manage their CDI and quality programs. Our Solventum consultants take that expertise directly from the field and into the classroom, so you have the most up to date content to succeed in your role.

## Contact Solventum today
