Solventum™ Fluency™ for Transcription Mobile App

- Robust mobile dictation solution for the creation of higher quality documentation on the go

- Physicians can document where they want, when they want and how they want

- Hybrid workflows ranging from traditional transcription-backed dictation to real time speech recognition in the EHR

Anywhere. Anytime. Any workflow.

Health care is fast paced, which means physicians need tools that keep up with their demanding workloads. That includes the ability to capture the patient story anywhere, anytime. Solventum Fluency for Transcription Mobile App lets physicians do just that and much more.

Solventum Fluency for Transcription Mobile App enables clinicians to dictate important patient information straight from a mobile device, review audio recordings, send notes to transcription, review transcribed documents, edit and sign documents.

Solventum Fluency for Transcription Mobile App is part of Solventum's integrated transcription solution that empowers physicians to take control of their workflow. To support the natural and individual workflows of physicians, Solventum Fluency for Transcription Mobile App provides them with the capability for mobile document creation so they can focus on what matters most—patient care.

A distinct advantage of using Solventum Fluency for Transcription Mobile App is that it uses the same cloud-based Solventum speech understanding technology that powers our speech-driven solutions. This means there is no need to train the system because it uses existing voice profiles for optimal accuracy.

Security, flexibility and mobility

Solventum Fluency for Transcription Mobile App enables physicians to save time dictating patient demographic information by scanning the patient barcode sticker with a camera. Physicians can find the right patient by name or medical record number, then select the correct patient from a list generated by a schedule interface with real time updates. The physician can then view patients in chronological order of their appointment time or from a list view.

In addition, physicians can use traditional transcription-backed dictation or self-edit recognized text. They can use front-end speech recognition for real time documentation. Solventum Fluency for Transcription Mobile App has easy to use recording and playback controls.

Solventum Fluency for Transcription Mobile App enables dictations to be sent directly to the Solventum cloud server via a secure HTTPS transmission, designed to meet Health Information Portability Accountability Act (HIPAA) and HITECH security protocols. Physicians can work when and where they want through offline, encrypted dictation, which automatically uploads when network connectivity is restored. They can also suspend jobs for later review or to edit and e-sign transcribed reports.
