

Solventum™ Fluency Align™

A smarter way to capture clinical documentation

Solventum Fluency Align now includes AI-driven speech recognition of Solventum™ Fluency Direct™ and ambient clinical intelligence technology, allowing organizations to capture patient information in the way that best fits with the clinician workflow. Whether user-driven dictation or ambient capture, Solventum Fluency Align supports physicians' preferred note creation experience for more accurate, concise and efficient documentation.

A complementary approach to clinical documentation based on clinician preference.
With Solventum Fluency Align, clinicians now have both technologies to work their way.

Solventum Fluency Align

Precision front-end speech dictation for intent-driven documentation

AI-powered speech recognition enables users to actively dictate, review and edit speech in real time.

Advantages:

- **High accuracy and precision** by using focused, user initiated dictation
- **Instant feedback and control** through immediate suggestions that let users review and adjust content with AI prompts as it is created
- **Structured capture** for tasks requiring clarity and intent
- **Reduced rework** through on-the-spot validation of clinical notes

Ambient capture for effortless clinical conversations

Ambient clinical intelligence captures information in the background without interrupting the physician's workflow or patient interaction.

Advantages:

- **Minimal disruption** to patient conversations and interactions
- **Reduced cognitive load** helps enable clinicians to capture documentation in real time
- **Comprehensive capture** of information without manual initiation
- **Improved efficiency** by eliminating the need to pause, dictate or capture details after patient care is complete

More flexibility, better documentation

By providing both precision dictation and ambient capture, Solventum Fluency Align adapts to real-world clinician preferences and evolving organizational needs. The result is more consistent, complete documentation, without asking users to change how they practice. These capabilities translate into meaningful benefits at every level:

- Clinicians can choose the level of control or automation that fits each encounter.
- Facilities can support multiple workflows across roles and specialties.
- Teams benefit from a consistent, scalable speech experience.
- Organizations are positioned for the future without needing to rethink their speech strategy.

One platform, two complementary technologies.

A smarter way to capture clinical documentation.

Solventum Fluency Align brings together precision and automation in complementary solutions, empowering clinicians today and preparing organizations for what's next.

Let's connect for better clinical documentation
