

Put the power of two to work for you.

The strengths of 3M™ Kerramax Care™ Super-Absorbent Dressing and 3M™ Coban™ 2 Two-Layer Compression System can help you manage venous leg ulcers (VLU).

A combination your patients can count on.

The combination of 3M™ Kerramax Care™ Dressing and 3M™ Coban™ 2 Compression System is designed to help clinicians and patients with the management of VLUs. The low profile of Kerramax Care Dressing and its ability to absorb and retain exudate even under compression, makes it a great partner with compression therapy.^{1,2} The Coban 2 Layer Compression System is a two-layer compression bandage system that is designed to deliver therapeutic compression required for treating patients with VLUs.³

Wounds International recently published eight case studies evaluating the clinical performance of Kerramax Care Dressing and Coban 2 Two-Layer Compression System. Outcomes show that patients with VLUs being treated in different care settings were satisfied with the combined treatment. It was reported that Kerramax Care Dressing stayed in place during wear time under compression, retained exudate and no strikethrough or leakage was observed.¹

1 3M™ Kerramax Care™ Super-Absorbent Dressing

Chronic, highly exuding wounds are difficult for both clinician and patient. Excess fluid can make achieving an optimum moisture balance difficult and can lead to maceration.

Kerramax Care Dressing with advanced Exu-Safe Technology absorbs and retains high levels of serous and viscous fluid away from the periwound skin and wound bed, helping to reduce skin maceration, even under compression.^{1,4}

The high absorption and retention of Kerramax Care Dressing can enable fewer dressing changes and minimise disturbance to the wound bed.^{4,5}

A positive patient experience can lead to reduced stress and anxiety when dealing with chronic wounds, which can help to reduce pain and improve patient compliance with treatment. Kerramax Care Dressing is designed for patient comfort.^{4,5}

3M™ Kerramax Care™
Super-Absorbent Dressing

Patients **70%**

Scored the dressing between 8-10 highlighting a **high level of comfort and positive patient experience.**⁴

n=101

Happy to continue **90%**

90% of responses indicated would be happy to continue using Kerramax Care Dressings as first choice for the management of highly exuding wounds.⁴

Key benefits

Absorbs and retains high levels of exudate^{4,5}

Soft, conformable and foldable²

Wicks vertically, then spreads out horizontally to minimise bulkiness

Low-profile, heat-sealed border

Easy to apply (using either side)

Can be used under compression⁵

Can be left in place for seven days

Venous leg ulcers affect 1% to 2% of the population, with the prevalence increasing $\leq 4\%$ for those aged >65 years.⁷

A monthly surface area reduction of

30%

provides a baseline healing rate for VLUs managed with compression therapy and advanced dressings.⁸

2 3M™ Coban™ 2 Two-Layer Compression System and 3M™ Coban™ 2 Lite Two-Layer Compression System

The Coban 2 Compression System and Coban 2 Lite Compression System provide effective compression therapy, which has been shown to contribute to effective VLU management through oedema reduction, decreased pain and improvement in a patient's daily activities.^{9,10,11}

Coban 2 compression system is easy to apply and remove, is designed to stay in place,^{9,10} and allows for normal footwear, increasing patient compliance and the potential for more effective treatment.^{9,11}

3M™ Coban™ 2
Two-Layer Compression System

3M™ Coban™ 2 Lite
Two-Layer Compression System

49%

of VLUs can be healed by compression¹²

Coban 2 Compression System is also effective at reducing lymphoedema and chronic oedema

Key benefits

Fast and easy applications

Therapeutic compression that stays in place

Comfortable to improve patient compliance

Not made with natural rubber latex

Conforms to patient anatomy

Provides consistent compression

Helps enable a more normal lifestyle

3M™ Coban™ 2 Two-Layer Compression System and 3M™ Coban™ 2 Lite Two-Layer Compression System

Coban 2 Layer Compression System, with the purple core and packaging, provides high compression and is ideal for treating the majority of patients with ABPI greater than or equal to 0.8. Coban 2 Lite Compression System, with the green core and packaging, provides a reduced resting pressure compared to Coban 2 Layer Compression System. Designed for those limbs with small circumferences (e.g. fingers, arms), for patients less tolerant of compression therapy, including those who have mixed etiology, are new to compression or where tolerance is not known. Suitable for ABPI 0.5 and above.

3M Code	Description	Roll Dimensions	Rolls/Box	Boxes/Case
2094N	3M™ Coban™ 2 Two-Layer Compression System for patients with ABPI \geq 0.8	Roll 1 – 10 cm x 2.7 m Roll 2 – 10 cm x 3.5 m	2 rolls, 1 of each layer	8
2794N	3M™ Coban™ 2 Lite Two-Layer Compression System for patients with ABPI \geq 0.5	Roll 1 – 10 cm x 2.7 m Roll 2 – 10 cm x 3.2 m	2 rolls, 1 of each layer	8
